**Culture: Chapter Three**

Our Invisible Teacher

In the deepest and most subjective layer, culture is the least studied aspect of human behavior. It is fragmented by mass media and the modern era. However, according to experts on the interplay of culture and function, the distinction between academic and popular culture is not as rigid as we often assume. How do we know how people express themselves? What are the characteristics of culture? How do they influence actions? Is there a universal human element? This is not a new subject, but a new perspective.

Although we believe that the culture and character definition is broad enough to include most of the elements of culture, we recognize that there are different contexts and perspectives of culture. As we have seen, culture is not just about material objects or symbols; it encompasses beliefs, values, customs, and behaviors that are shared by a group of people. In this way, culture is a social construct that is used to explain and interpret the world around us. 

Culture is also a dynamic concept, constantly evolving and changing over time. This means that our understanding of culture must also be dynamic, adapting to new information and experiences. As we continue to explore the concept of culture, we will examine how it is defined and understood in different societies and contexts, and how it influences our daily lives.

Some Definitions of Culture:

- Culture is a system of learned behavior patterns that are shared by a group of people.
- Culture is a set of values, beliefs, and behaviors that are passed down from one generation to the next.
- Culture is a way of life that is shared by a group of people and is learned through observation and social interaction.
- Culture is a complex system of symbols, beliefs, values, and behaviors that are shared by a group of people and that define their way of life.
- Culture is a way of life that is shared by a group of people and that is learned through socialization and imitation.

Each of these definitions highlights different aspects of culture, and each has its own strengths and weaknesses. As we continue to explore the concept of culture, we will consider these different perspectives and evaluate how they contribute to our understanding of this complex and dynamic phenomenon.
The Influence of Culture

The four categories of cultural influence are as follows:

Social role refers to the expectations and behaviors that are associated with a particular social position or status. These roles are learned and internalized through socialization.

Norms are the unwritten rules and expectations that govern social behavior. They are learned through socialization and are enforced through socialization.
